EXHIBIT "B"

PROPOSED IMPROVEMENTS FOR STATE ROAD CANAL DREDGING **MUNICIPAL SERVICE BENEFIT UNIT**

The project involves the restoration of safe navigation by the maintenance of an area of 20,250 square feet (0.46 acres). The project consists of one cut that will average about 45 feet wide and 450 feet long. Dredging work will maintain a clearance of 10 feet from any dock or structure. The canal bottom will be excavated to a central depth of -5.0 feet NGVD with side slopes of 2H:1V to 3H:1V depending on slope stability. Based on a 2H:1V slope about 1,873 cubic yards of sand and silt will be removed.

The project provides two acceptable methods for the removal of the spoil material. Mechanical excavation from land or mechanical excavation by barge. The barge method would be offloaded at nearby Rogers Park for dewatering and then be transported to an approved storage site at Pedersen Park. The land method would require the spoil material to be loaded in sealed trucks for transport to the same site. Per the permit, the stored material must be used for county projects.
